

DEWANG NERALLA

Director - Technology

- Vast experience of nearly two decades in transactions' technologies and their implementations
- As FT Group's technology strategist he had laid down the technology infrastructure
- He defines the technology roadmap of the entire organization, including Atom Technologies
- Constantly innovates and invents as he believes in introduction of new technology architecture, new components and protocols are invincible for future technological breakthroughs

Mr. Neralla is a Director of Atom Technologies and co-founder and Director Technology of Financial Technologies (FT), the technology leader for creating next generation financial markets.

With a vast experience of nearly two decades in transactions' technologies and their implementations, Mr. Neralla is spearheading one of FT group's new ventures Atom Technologies to create a revolution in the payment ecosystem, especially focusing on the mobile ecosystem, which includes traditional card-based payments over mobile, IVR as well as PoS and newer approaches to usher in inclusive growth using technology.

As FT Group's technology strategist, Mr. Neralla had laid down the technology infrastructure that has today become the driver for Atom and all the other divisions and subsidiaries of the FT Group. He plays a strategic role in identifying and implementing the architectural, designing strategies and plans for both Atom as well as FT Group's technology business. In addition, he defines the technology roadmap of the entire organization, including Atom Technologies.

Mr. Neralla's vision and mission was to develop a mobile-based payment solution that will eventually replace credit-card payments. He wanted to create a convenient and secure mobile payments platform for the masses, establish a social goal for providing delivery of financial services for the 'unbanked' and emerge as India's number one service provider for payments. The outcome of this clairvoyance was Atom, which is not only a technological marvel but also a strong business proposition on its own as it reduces the cost of transactions considerably.

His strive to constantly innovate and invent continues as he believes introduction of new technology architecture, new components and protocols are invincible for future technological breakthroughs for Atom and the FT Group at large.

Mr Neralla holds a Bachelor of Engineering Degree in Computer Science. He has been a featured speaker at several national and international academic, business, and technology forums as well as at industry events.
