

Connectivity Solutions Suite

Need

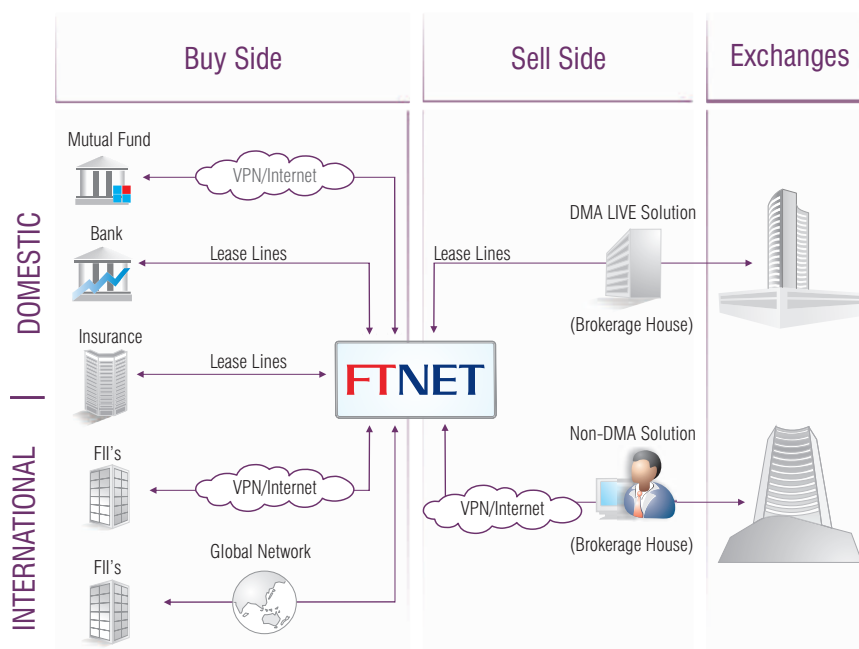

Regulatory and economic reforms in India are attracting domestic as well as international capital inflow into Indian capital markets. India is the most favored economic destination for Global Institutional Fund houses with more investment opportunities than ever before. More and more active buy side participation in markets has led to a phenomenal surge in the volume of transactions providing adequate liquidity. This is also evident with major fund houses and Institutional Investors that have forayed in the markets in recent years. To thrive in the current competitive market, every buy side has to perform exceptionally well and provide better return to their investors.

One of the constraints in capitalizing on the surge in volumes and liquidity is the dependency of buy side on the conventional messaging infrastructure for trading with sell side. Unavailability of a seamless connectivity leads to drawbacks like delay in execution, lack of operational efficiency and most importantly loss of valuable business opportunity.

This creates a need for a connectivity solution which would support the increased capital inflow channelizing the much needed liquidity to the appropriate venues for buy-side as well as sell-side.

Overview

FTNET is a fully managed, FIX compliant global network which provides fast, secure and reliable access to major liquidity sources for multiple asset class in the financial markets. It offers continuous business connectivity to buy-side as well as sell-side communities

FTNET provides connectivity to multiple sell side over a single connection and thus helps buy side control transaction costs, access liquidity pools and trade more efficiently. It involves modern day highly scalable and robust technology which enables automated features aimed at reducing market impact, maximizing execution quality and improving overall operational efficiency. The automation raises productivity levels by helping sell side traders handle more orders simultaneously. FTNET offers a comprehensive and streamlined means of trade order execution to minimize exceptions. It adopts a structured and highly effective process for strategic execution that spans across the trading continuum.

FTNET brings to the table, time and place advantage for entire financial markets ecosystem across the globe by providing value added services and global reach.

FTNET Solutions Suite

Features

- Partners with the connectivity providers across globe to create a truly global network
- FIX compliant for multiple asset class
- Fault tolerant and robust network
- Increased operational efficiency and less human intervention
- Secure and reliable

Value Proposition

- Optimizes execution quality and improves overall trading performance through end-to-end automation
- Connects domestic funds and foreign institutional investors to domestic as well as international broker-dealer
- Broker neutral service that enables clients to access multiple liquidity venues speedily and seamlessly
- A workflow facilitator for buy side and sell side trading desk by providing continuous business connectivity
