“Provides online initial margin and position for all clients”

The screenshot displays a complex data table with multiple columns and rows, likely representing client accounts, their positions, and margin requirements. The interface includes various filters and navigation options typical of a financial reporting tool.

“Comprehensive functionality and risk management”

This screenshot shows another view of the software's data tables, highlighting different aspects of the risk management and reporting functionality. It includes various data points and summary statistics for client accounts.

Protector+

Protector+ is post-trade, pre-acceptance, online risk management solution, which enables the members to mitigate risk in Equity, Equity Derivatives, Exchange Traded Currency Futures as well Commodity segments.

As the number of clients grows, it becomes critical to identify the clients who are in the High Alert area, where margin call is required as the margin limit in Cash and Non Cash gets fully utilized. Protector+ is an online Risk Manager, which enables the broker to protect from the risk. Protector+ provides the online Initial Margin & Position of the each & every client, irrespective of the location of one's VSAT & Leased Line. All the VSAT or leased lines need not to be connected to one location. It enables the Brokers to compare the Deposit given by the client in Cash & Non Cash with the actual Margin required by the Exchange.

Protector+ also has pre-trade online monitoring for CP Clients for risk management before trade acceptance.

Key Highlights

- Integrated Online Margin Monitor Report for all exchanges in a single view
- More than 30 Reports with different filter criteria
- Scrip wise and Client wise Margin Calculators
- Alerts tracks on Volume and Value
- Terminal wise multiple Reports
- Auto Update of SPAN file from exchange web site
- Online communication of Margin position to clients thru e-mail facility in built in the application

Value Proposition

- An online risk manager, which enables the broker to protect his client from the risks in Equity, Equity Derivatives, Exchange Traded Currency Futures as well Commodity segments
- Automatically picks up the Online trades from the Corporate Admin given by NSE for Calculating the Real time Initial Margin of NSE
- Provides the Online Initial Margin and Position of each and every client irrespective of their locations
- Enables the members to compare the deposit given by the client in Cash & Non-cash with the actual margin required by the Exchange
